Staff Software Engineer with a decade of building inclusive interfaces at scale. I lead cross-team initiatives — design systems, accessibility compliance, frontend platforms, mobile applications — and mentor engineers from new grad through senior. I work where engineering, product, and design overlap: end-to-end solutioning, regulatory risk, and the architectural decisions that make complex products feel simple to ship.

EXPERIENCE

Staff Software Engineer · *Meta*

Current

- Risk & Compliance Tools and Automation — turn regulatory and policy requirements into reliable, repeatable software for risk and compliance teams operating at Meta's scale.

Principal Front-end Engineer, Manager · *EAB*

Jan 2020 – Aug 2021

- People-managed a team of frontend engineers while continuing technical leadership of platform, design system, and accessibility initiatives below. Owned roadmap, hiring, performance, and the quality bar.

Principal Front-end Engineer · *EAB*

Sep 2017 – Jan 2020

- Led WCAG 2.1 compliance across multiple product teams: audits, prioritized remediation, mitigation patterns, design-system and implementation-guideline updates, accessibility-focused code review.
- Built unified enterprise design system + Web Components library for EAB products — supporting multiple frontend frameworks; authored in TypeScript with per-component accessibility and performance audits.
- Architected application framework with shared services (auth, routing, tracking, logging, caching, network, error handling) and prefabricated UI solutions; webpack/rollup tooling and CLI, Chai/Mocha/Cypress test support, CI for builds, tests, audits, and deploys.
- Built a highly configurable course-catalog search interface: metadata contracts driving dynamic form fields, Elasticsearch metadata transforms, runtime-configurable per school.
- Oversaw frontend for Navigate Smart Guidance (desktop + mobile). Established best practices and software patterns for rapid, performant UI development; mentored junior engineers.
- Managed releases, triaged critical high-priority issues, partnered with UI/UX on a consistent EAB brand experience across products.

Senior Front End Engineer · *The Advisory Board Company*

Nov 2015 – Sep 2017

- Led UI development across multiple product features and a multi-product unification initiative on Navigate.
- Explored and introduced a universal Web Components-based framework to accelerate development across multiple teams.
- Led accessibility-first development — upgraded internal UI framework and tooling to incorporate accessibility solutions across products and achieve certification.
- Delivered Academic Planning and Course Registration features: client-side rules engine for schedule validation, WebSocket-based real-time collaboration between students and advisors.
- Bootstrapped Navigate/Guide mobile app on Angular/Ionic/Cordova — group messaging, task management, appointment scheduling, multi-school auth integration, offline experience, push notifications, native calendar integration.
- Streamlined build processes across products; mentored junior developers in software patterns, best practices, tooling, and frontend frameworks.

Front End Engineer · *The Advisory Board Company*

Aug 2014 – Nov 2015

- Built a common UI framework to accelerate development across multiple product teams and maintain consistent brand for the Education Advisory Board.
- Led a team of three developers building the EAB Navigate mobile app for both Android and iOS.
- Partnered with product managers and lead architects on end-to-end solutions; collaborated with UX and visual designers on UI widgets for mobile + desktop.

UX/UI Designer & Front-End Developer · *FanFueled*

Jun 2012 – Aug 2014

- Defined branding and product UX strategy across FanFueled Shopping, Engage, and Events — information architecture, wireframes, rapid prototypes, comprehensive UX documentation.
- Built responsive social-engagement campaigns for Bud Light Platinum Nights and Michelob ULTRA Foursome.
- Designed and implemented checkout, search, social-sharing, and personalization features; high-fidelity HTML/CSS/JS/AJAX prototypes that drove design decisions.

SKILLS

Engineering leadership	Technical strategy · design-system ownership · cross-team initiatives · code review · mentorship · hiring · roadmap
Frontend platform	TypeScript · React · Web Components · Angular · Vue · webpack · rollup · Vite · Jest · Cypress · Mocha
Accessibility	WCAG 2.1 · Section 508 · ARIA · screen-reader validation
Mobile	Ionic · Cordova · iOS + Android app delivery
Infrastructure & CI/CD	AWS (S3, CloudFront, IAM) · GitHub Actions · GitLab CI · Lighthouse CI
Design & UX	Information architecture · interaction design · rapid prototyping · design tokens

EDUCATION

DePaul University · Master's, Human-Computer Interaction

Birla Institute of Technology and Science (BITS Pilani) · Bachelor of Engineering (Hons), Computer Science
